

Survey Dates from 26/06/2024 to 02/07/2024

Introduction

This survey was carried out by means of an automatic traffic counter connected to pneumatic tube sensors, attached to the carriageway surface. With a good road surface and careful installation a high degree of accuracy is possible. It is expected that traffic flows are within +/- 2% and speeds within +/- 3% overall. Surveys are carried out over a period of at least 7 days. These results have been averaged over a 7-day period.

Mean Speed is the measurement used nationally in the assessment of speed limits. The 85%ile speed is the speed at or below which 85% of vehicles are travelling. All Speeds are given to the nearest mph.

Traffic volumes are usually averaged over 24 hours and 7 days to reduce the effect of daily variations and give the best indication of overall traffic. In the table below, volumes are rounded to the nearest 10 vehicles, but individual classes are given to the nearest vehicle. Therefore some rounding differences may occur.

Summary of Results

	Volume (All Vehicles)		24 hr Average Speed (mph)		7 day Average Vehicles by Class						
	7 day Ave	Mon-Fri Ave	Mean	85 %ile	Pedal Cycle	Motor Cycle	Car or Van	2 or 3 Axle Rigid Lorry	4 Axle Rigid or Articulated Lorry	Bus	Other
NORTHBOUND	80	80	21	28	16	6	46	2	2	0	4
SOUTHBOUND	70	70	20	27	13	5	42	1	1	0	2
Combined	140	150	20	27	29	11	88	4	4	0	7

Directional Volume by Day of Week

Volume by Time of Day

Speed Distribution (mph)

Average Speed (mph) by Hour of Day

Vehicle Classes (see table above for more details)
