Bring Your Own Device (BYOD) Policy

An accessibility friendly version of this policy is available on the Information Management and Security Policies page.

1.0   Policy Statement

Gloucestershire County Council (the council) has a responsibility to ensure that its information assets are protected and access controlled to maintain the confidentiality and integrity of that information. The council also accepts that to promote hybrid and flexible working there is a requirement for staff to have access to information and systems from personal devices using the council's approved Bring Your Own Device (BYOD) technology.

The purpose of this policy is to define accepted practices, responsibilities and guidance for the use of approved personal devices that the council authorises to connect to its systems. It also aims to ensure appropriate access and use of council information and systems, which will help to mitigate against:

- Harm to individuals
- Loss of personal, special category, commercial or politically sensitive data
- Damage to the council's reputation
- Potential legal action and/or fines against the council or individual(s)
- Inappropriate use of council resources and systems
- Viruses and other malicious software
- Service disruption

This policy also sets out how the council will control access to council systems and information on personal devices in order to support compliance with Cyber Essentials accreditation. It is important that the consequences and obligations of this arrangement are well communicated and understood.

Any suspected or observed breach must be promptly reported in line with the council's Information Security Incident Management Policy.

BYOD is provided to staff employed by the council, and therefore they must read and accept this policy upon first accessing any data or systems via the BYOD system.

2.0   Scope

This policy applies to all employees, partners, contractors, Members, agents of the council and other third parties ('users') who access from personally owned mobile devices or unmanaged mobile devices, smartphones and tablets to connect to GCC systems.

All council data accessible on a user's device via BYOD remains the property of the council.

3.0   Eligible devices and platforms

BYOD will be accessible to staff on iOS (for example, iPhone) or Android devices.

Before accessing council systems and data the application will check the version of the operating system on your device. Users should be using the latest version of the operating system; this will be technically enforced 10 days after the release date, unless there is a critical vulnerability which requires the council to enforce it sooner.

Users will have to authenticate their device using the approved council procedures in order to access any apps or data through BYOD.

Personal devices will only be allowed access to the BYOD system if they have the most recent or previous operating system of the above devices or platforms installed.

4.0   Responsibilities

The **user** must accept the following:
- The BYOD system is to be used for council work only and must not be used in any way which contravenes this or any other council policy.
- Users must contact the ICT Service Desk within one working day if their device is lost, stolen, or otherwise comprised, to allow the council to shut down access from the personal device to council data and systems.
- Users must not allow their family members, friends or other individuals access to their personal device that is logged into the BYOD system and any data and systems accessed through it.
- Users must not circumvent council controls, download and/or copy council data to or from their personal devices.
- Users must not screenshot, screengrab or take photos of council data on their personal devices.
- Users should ensure that any business applications provided by the BYOD system are closed before using their device for personal reasons.
- Users must be aware of their surroundings when using the BYOD system to access GCC data.
- Users should install anti-virus software on their personal device.

The **council** will ensure that:

- Appropriate security is in place for the BYOD system to protect council systems and data.
- The application is configured to use the shortest screen lock time available.
- A user's access to council data and systems through BYOD is removed upon them leaving employment with the council.
- Use of BYOD is monitored and any suspicious activity in breach of council policies is investigated.

The **council** reserves the right to:

- Revoke access to council data through BYOD where there is evidence it is not being used in accordance with this or any other council policy.
- Remove council data and any BYOD applications from the user's device – this will not affect user's personal data/applications.

The **council** will not accept any responsibility for:

- A personal device which breaks or becomes damaged whilst the user is conducted council business. It is the responsibility of the user to take out appropriate insurance, warranty agreements or repair services.
- A personal device which is lost or stolen whilst conducting business on behalf of the council.
- Any data or network charges by the network operator for the device resulting from the use of the BYOD system or access to any council data on the user's personal device.
- Any charges associated with installing and running anti-virus software the user decides to install.
- Providing technical support to a personally owned device.

5.0   Policy compliance

Security breaches that result from a deliberate or negligent disregard of any security policy requirements may, in the council's absolute discretion, result in disciplinary action being taken against that employee.

If breaches arise from the deliberate or negligent disregard of the council's security policy requirements by a user who is not a direct employee of the council, the council shall take such punitive action against that user and/or their employer as the council in its absolute discretion deems appropriate.

The council may, in its absolute discretion refer the matter of any breach of its security policy requirements to the police for investigation and (if appropriate) the instigation of criminal proceedings if in the reasonable opinion of the council such breach has or is likely to lead to the commissioning of a criminal offence.
