

## **Preliminary flood risk assessment: Gloucestershire County Council**

This addendum by Gloucestershire County Council (2017) updates the council's preliminary flood risk assessment report published in 2011. Read the addendum in conjunction with the [preliminary assessment report](#).

### **Addendum**

The preliminary flood risk assessment (PFRA) and flood risk areas (FRAs) for Gloucestershire County Council were reviewed during 2017, using all relevant current flood risk data and information.

Changes to the assessment of risk since the preliminary assessment report was published in 2011 are described in the statements in this addendum.

### **Past flood risk**

There have been no past floods since 2011 which have changed our understanding of significant flood risk within the LLFA area.

### **Future flood risk**

The Annual Implementation Plan was created in 2014; this is a prioritisation process of the parishes within our county which require flood alleviation. This is updated yearly.

### **Flood risk areas (FRAs)**

The following FRAs have been identified for the purposes of the Flood Risk Regulations (2009) 2nd planning cycle:

- One FRA has been identified within the Cheltenham area of the County, which covers a 3x4 km<sup>2</sup> area. Covers an area where significant accumulations of surface water are likely to be found. A flood alleviation scheme is currently in progress at this location, at the time of writing works are due to start shortly providing relevant authorisations are in place.

### **Other changes**

There have been no other significant changes to the LLFA and its area since the original PFRA report was produced.
