## Pension Fund performance

### Performance (annualised)

Source: State Street Global Services  
\*per annum. Net of all fees.

### Key events

Quarter 4 witnessed an almost-synchronised fall in global inflation, which played out at a faster pace than expected. This led to investor hopes that interest rates might start to fall sooner than had been thought. The result, unsurprisingly, was a rally across most asset classes. The S&P 500, in the US, saw a rise of more than 11%, bringing the gain during 2023 to 26%. Bond markets also rallied strongly. Commodities were a laggard, and Energy's trajectory reflected both strong supply and fears that Chinese growth would continue to be weak.

The total fund rose 4.6% during the quarter, while the benchmark rose 4.2%. Across the calendar year, the fund rose 9.8% vs the benchmark's increase of 10.2%.

Brunel's portfolios reflected the strength of markets and were all up in absolute terms. The hedged portfolios performed more strongly than their unhedged equivalents due to a bounce in sterling.

#### PAB & CTB Passive Global Equities

Please note that both the WACI & Extractive Exposure figures for these two portfolios show a significant increase quarter on quarter. We are liaising with State Street to understand the precise reasons behind the increase.

PAB and CTB both target a 7% annual reduction in WACI (EVIC based) post rebalancing. Data from FTSE indicate that both portfolios met this target after the last rebalance in October 2023. We would note that State Street use a different methodology for WACI (revenue based).

## Chief Investment Officer commentary

"When the facts change, I change my mind, what do you do?" This quote, often attributed to Keynes or Churchill, would be very apt for the final quarter of 2023, in which almost every asset class rose in value, reversing the malaise of the previous quarter.

Global equities rallied, with the US market leading the way with a rise of more than 11% in local currency terms. The S&P 500 finished the calendar year up over 26%, almost touching all-time highs. Whilst over 80% of this was attributable to the "magnificent seven", the rally broadened out in the final quarter. Emerging markets also made progress, but the broad index was held back again by the performance of China, as continuing concern around the property sector and further government intervention in the tech sector weighed on share prices. Elsewhere, the UK stock market posted a positive return albeit lower than other regional markets as the strength of sterling versus the US dollar dampened the prospects of large cap multinationals. This did allow small and mid-cap stocks to rise, and thus delivered active managers the chance to flourish. The relative strength of the pound also meant that unhedged overseas asset class returns were significantly lower than currency-hedged returns.

The main "change in facts" that drove markets higher was the almost synchronised fall in global inflation, at a pace faster than expected. Previously, the market had galvanised around the view that the hiking cycle was over, but that rates would be higher for longer. When US CPI fell from 3.7% in September to 3.1% in November, and Eurozone inflation also fell to 2.4% (versus 10.4% a year earlier), the market "pivoted" and interest rate cuts for 2024 were priced back in. The core measure of the Personal Consumption Expenditures deflator, possibly the most influential data series for the Fed, weighed in at exactly 2% (the central bank's target) for the third quarter. As such, it became very plausible to claim that the inflation dragon has indeed been slain. This view gained further credence when Fed chair Jerome Powell indicated that the central bank was aware of the risk of keeping rates at restrictive levels for too long. Minutes from their latest policy meeting showed that members expect rates to end next year at 4.5%-4.75%, down from the current 5.25%-5.5% range.

Unsurprisingly government bonds also rose in value, posting their best quarterly performance in 20 years, as the change in Fed forecasts drove all bond markets higher – even if other central banks expressed more caution. The rally in duration and risk assets inevitably meant that corporate bonds did well, as financial conditions eased. Should this trend continue, it lowers the probability of a deep recession and thus default risk. Sub-Investment Grade bonds, performed strongly, capping a year of double-digit returns for the asset class. However, it has left spreads (the compensation an investor receives for default risk) at very low levels, reducing the protection investors have if a recession has in fact been delayed rather than cancelled as increasingly the market is pricing.

In private markets, falling interest rates will also help the forward valuations of assets. This is most directly evident in infrastructure and real estate, where values are much more closely tied to discount rates – lower rates being better for the net present value (NPV) of assets, but also through potentially lowered funding costs. Contra to popular opinion, it is in the often-opaque private markets that we have seen the signs of stress from higher rates building up. Specifically, we have seen interest rate coverage come down sharply in private debt, where the floating rate nature of the loan book means that they have been affected more quickly than their public market counterparts. This has led to private equity sponsors using varying techniques to preserve cash or even shore up businesses with "equity cures". 2023 also saw a log jam created by a muted IPO market, which led to realisations being delayed. (This is not an issue in the Brunel funds, given the relative infancy of the programme). Some commentators expect this trend to reverse in 2024 because of the perception that the backdrop is improving, but it remains a watchpoint, given the increasing importance of private investments in the financial system.

Only commodities declined in the final quarter, driven by falling prices in the agriculture and energy sectors. The production cuts that had driven energy prices up 25% in Q3 were undermined by a failure by various actors to comply with the agreed supply reduction.

Looking back over 2023, it is clear that the year wrong-footed many commentators, given the predicted recession never materialised. Although gains in asset prices were not surprising given the fall in values in 2022, the strength of the rally surpassed most investors' expectations. That said, as we have highlighted before, the market was very narrowly driven by a few large stocks – gains were not evenly distributed. The question for 2024 is: has inflation been tamed and a recession successfully avoided? To my mind, there isn't yet a conclusive answer. However, the probability of a successful soft economic landing has increased, due both to the very slow deflation of consumer spending, which has supported markets, and the recent easing of financial conditions. However, the market has very much priced this scenario in, and so any disappointment will be keenly felt in asset values.

## Performance commentary

Global developed equities (as proxied by the MSCI World index) returned 6.8% in GBP terms over the quarter. The market rally, which took place in November and December, reflected easing inflation and rising expectations of a potential end to the "higher-for-longer" monetary policy regime. Index returns were again driven by large IT-related names. Five of the top 10 contributing companies came from the 'Magnificent 7' (Microsoft, Apple, Amazon, Nvidia and Meta), and another four were semiconductor names (Advanced Micro Devices, Broadcom, ASML and Intel). Taken together, these names contributed 2.3% to the index return. Style characteristics showed a reversal versus last quarter, as Growth outperformed Value.

The portfolio returned 6.2% during the period, underperforming the benchmark by 0.6%.

Sector attribution showed a small positive impact, which was largely a result of the underweight to Energy, the weakest-performing sector. Stock selection exerted a negative impact on relative performance, which was weakest in the Industrials sector, largely due to an overweight holding in Alstom (the French train manufacturer). It returned -46%, after the company downgraded cashflow guidance due to delays to both deliveries and new orders. Stock selection was strong in the IT sector, where the largest positive contributors were overweight holdings in Microsoft and two semiconductor names, ASML and TSMC. (These three returned 14%, 22% and

15% respectively. TSMC is a large Taiwanese semiconductor company that sits outside the MSCI World index).

Four of the five underlying managers underperformed the index this quarter. Baillie Gifford's strong outperformance was the outlier, driven by positive selection in the Financials and IT sectors. Baillie Gifford benefited from the semiconductor names held in its portfolio as well as from some companies recovering from negative returns last quarter (among which Adyen was the most notable - down 55% last quarter, but up 65% this quarter).

From inception to quarter-end, the portfolio outperformed the benchmark by 1.3% p.a.

## Performance commentary

The portfolio returned 8.0% over the quarter on a net basis, a relative outperformance of 1.6% against the MSCI ACWI benchmark. Ownership, Jupiter and Mirova all outperformed, whilst RBC were inline, and Nordea returned 5.3%. Over the 1-year period, the fund returned 9.3%, underperforming the MSCI ACWI by 6.6%. All underperformance came through in Q2 and Q3. In Q2, the market was heavily concentrated while, in Q3, the environment favoured Energy stocks. However, the shift discussed in the CIO commentary meant Q4 provided an environment in which the Global Sustainable Equity Fund could significantly outperform the index.

The synchronised fall in global inflation led the market to anticipate a number of rate cuts throughout 2024; this "market pivot" supported increasing equity valuations in Q4.

The portfolio has greater exposure to the Quality/Growth styles and thus future cash flows account for a greater weighting than in the broader market. When interest rates are expected to decline, the present value of these cash flows increases, and company valuations also increase. The portfolio added relative alpha through its positioning in growth-orientated sectors and sub-sectors, such as Software, Health Care Equipment and Financial Services, but also through avoiding Value-focused market sectors such as Oil and Gas, which fell 7% over the quarter.

As discussed last quarter, we have also undertaken a lot of work with the managers to understand the fundamental quality of the businesses we are invested in. We look at metrics such as quality of leverage and stability of margins.

Whilst the interest rate decline may provide a short-term technical uplift in valuations, we hope the quality of the businesses will continue to provide alpha over the long term, when interest rate stability returns to the market.

Whilst we are disappointed that the portfolio underperformed over the year, we take comfort that the majority of sustainable managers also failed to outperform the MSCI ACWI over this time period. Compared to the Sustainable peer group, the MSCI ACWI would have finished in the top quartile and those managers that did outperform the index had notable overweight positions in 'Magnificent 7' stocks, which, from our perspective, are not all aligned to sustainability.

## Performance commentary

The FTSE All-Share Index excluding Investment Trusts returned 2.9% over the quarter, underperforming the developed market index (MSCI World) by nearly 4% in GBP terms. This underperformance reflected the UK's larger exposure to the Energy sector, which performed poorly as concerns grew over weakening demand and supply complications. In a reversal of the previous quarter, the FTSE 100 significantly underperformed the FTSE 250.

The portfolio returned 4.1% during the period, outperforming the benchmark by 1.2%, and delivering a third consecutive quarter of outperformance.

Sector attribution shows that allocation was the main driver of outperformance, with an overweight to the Industrials sector and underweight to the Energy sector the main

contributors. Selection also contributed positively and was strongest in Consumer Staples, where an overweight to M&S and underweight to British American Tobacco (BAT) were the largest contributors. M&S returned 15.6% after an encouraging trading update, with revenues growing c.11% year-on-year. These combined with successful cost savings to enable the business to translate strong sales into significant profit growth. Meanwhile, BAT returned -8.7% following a write-down of c.£25 billion on its US combustibles industry (U.S. cigarettes) due to falling demand for its products, as consumers switched to cheaper brands or quit.

Market cap allocation was another positive contributor this quarter. The portfolio was underweight the smallest quintile of companies in the index, which added 0.9% to relative returns.

On a manager basis, Baillie Gifford performed strongly (2% above the index), benefitting from an underweight to Energy and overweight to Industrials. On a stock basis, there were notable contributions from M&S, Autotrader and Persimmon, while zero exposure to BP, HSBC, and British American Tobacco, all major index constituents, also supported relative returns. Invesco outperformed the index (by 0.7%), driven by the positive contribution from Momentum, while the other two targeted factors (Quality and Value) were neutral in terms of relative performance.

From inception to quarter-end, the portfolio underperformed the benchmark by 0.9% per annum.

## Performance commentary

As mentioned in the CIO commentary, most Emerging Market (EM) economies made positive progress in the final quarter of the year, resulting in a modest gain of 3.3% for MSCI Emerging Markets. China was a notable absentee from the rally, falling 8% over last quarter to end the year down 16%. A combination of sluggish growth, regulation fears, outflows of foreign capital and property fears continued to weigh on sentiment towards Chinese equities.

The EM portfolio returned +3.7% last quarter, which was ahead of the benchmark return of +3.3%. Outperformance was driven by stock selection. Genesis and Ninety One beat the benchmark by 1.6% and 1.3%, respectively. Wellington underperformed by 2.1% due to poor stock selection in China and Consumer Discretionary businesses. Performance for

2023 was in line with the benchmark on a gross-of-fees basis, lagging by 0.5% net of fees. Since-inception performance remained behind the benchmark, lagging to end-2023 by 1.8% on an annualised basis.

PDD Holdings, a multinational commerce group predominantly held by Genesis, was the standout performer over the last quarter. PDD rose 43% after beating earnings expectations by 30% in November. This was the second successive earnings beat. The portfolio held approximately 2.4% in PDD as at year end, 1.2% more than the benchmark.

Sector-level positioning was a mild detractor last quarter. The bias towards consumer sectors hurt relative performance, with Consumer Discretionary and Consumer Staples

underperforming the benchmark by 6.7% and 1.3% respectively.

Most styles performed in line with benchmark last quarter. The only notable exception was Quality, which outperformed broader markets by 4.2%. The portfolio is mildly overweight Quality due to Genesis' focus on identifying companies with sustainable, free-cashflow generation, strong governance, and alignment with minority shareholder interests. This acted as a tailwind for relative performance.

The outlook for EM remains cautiously optimistic. All three managers actively added to companies where share price weakness provided a good buying point. However, investors should still be mindful of the slowdown in China, which could have worldwide repercussions.

## Performance commentary

The Diversifying Returns Fund returned 3.2% over the fourth quarter of 2023. The benchmark return was 2.0%.

The sterling-hedged 50/50 equity/bond index we monitor returned 7.6% over the quarter, highlighting the strong returns generated by traditional asset classes. Since portfolio inception, the equity/bond index had returned 3.0% at quarter-end and the fund had returned 3.3% (on an annualised basis).

Whilst the fund fell behind the cash-plus benchmark, the latter remains hard to beat in an environment where interest rates have risen aggressively. Moreover, the fund did recover from the drawdown that started in 2022. Since January 2022, equity markets remain 7% down on a sterling-hedged basis and, whilst we expect equities to outperform the DRF portfolio

over the long run, the faster drawdown recovery of the DRF portfolio highlights the advantages of a defensive strategy in challenging conditions.

The portfolio was able to capture the positive returns from equity and bond markets through the holdings in Lombard Odier and Fulcrum. Fulcrum further added positive returns through long duration positioning and volatility carry in the discretionary macro section of their fund. Over the quarter, Lombard Odier returned 4.6% and Fulcrum returned 2.2%.

The fund also benefitted from exposure to alternative premia. UBS had a strong quarter, returning 6.0%. The Norwegian Kroner and Japanese Yen appreciated - both are large positions in the UBS funds. Despite the Bank of Japan maintaining loose monetary policy, the Japanese yen was a

beneficiary of dovish comments from other central banks, as markets priced the possibility of a fall in the rate differential between Japan and the rest of the world, thereby driving the yen to extreme levels of weakness. The Norwegian kroner was well supported as the Norges Bank delivered a surprise interest rate hike, citing continued high inflation.

JP Morgan's returns were more muted, following a very strong few years' performance, with the fund returning 0.3% over the quarter. JPM made small positive returns from a number of the alternative premia signals it targets. The sector-neutral, equity Value signal, credit carry and cash provided the strongest returns. However, these were largely offset by relative Value momentum in equities, as the Federal Reserve interest rate commentary led to an equity market shift.

## Performance commentary

Sub-investment grade credit markets finished the year in strong fashion, resulting in double-digit gains for 2023. As mentioned in the CIO commentary, the market narrative on interest rates changed from 'higher for longer' to 'pivot', following better-than-expected inflation data in the US. The UK also saw interest rate expectations fall.

US and UK yields fell right along the curve, but more so at the policy-sensitive end. 2-year yields for the US and UK ended the year at 4.25% and 3.96% respectively. Credit spreads also fell across the quarter, as hopes of a soft landing grew. High Yield option-adjusted spreads – proxied by the Bloomberg High Yield Index – ended the period at +423 basis points (bps), a 58bps decrease from Q3 2023. The backdrop of declining interest rate expectations and spread compression resulted

in all asset classes making a positive return over the quarter. Fixed rate assets appreciated far more than their floating counterparts. The best-performing asset classes were Contingent Capital (CoCos) and Emerging Market Sovereigns, which returned +11% and +10.2%, respectively, in local currency terms.

The portfolio returned +5.4% over the quarter, which was comfortably ahead of the primary benchmark (SONIA +4%), which returned +2.3%. The portfolio was in line with the secondary composite benchmark, which is evenly split between the Bloomberg Global High Yield and the Morningstar LSTA US Leveraged Loan Index. Neuberger Berman, CQS and Oaktree returned +5.9%, +4.7% and +4.8% respectively. Neuberger Berman posted a stronger return due

to its rate-sensitive allocation to Investment Grade Corporates - it took profit on its allocation later in the quarter.

Performance for the calendar year was an impressive +12.4%, materially ahead of the primary cash benchmark. Since-inception performance is now +1.5%, which lags the primary benchmark by 5.0%. The composite benchmark has returned approximately +1.8% over the same period.

All three managers maintain a cautiously optimistic outlook. All-in yields have fallen to 7.9% for the Multi-Asset Credit portfolio, with a duration of 2.7 years. Investors should remain wary of the reduced amount of compensation for credit risk. Our managers remain heavily focused on the quality of their issuers.

Benchmark	7.4	8.6	-	-4.7
Excess	0.5	1.9	-	0.6

Source: State Street Global Services

\*per annum. Net of all fees.

## Performance commentary

Bond markets rallied over the quarter as headline inflation fell and markets began to price in interest rate cuts in 2024. The result was significant falls in bond yields in November and December. The sterling investment grade credit market (non-gilt) returned 7.4% over the quarter, as a result of lower government bond yields and tighter credit spreads. Given the fall in yields, sectors with a greater proportion of long-dated bonds performed well, including utilities and social housing, whilst supranationals was the worst-performing sector.

Over the period, the Sterling Corporate Bonds portfolio returned 7.8%, outperforming the benchmark by 0.5%.

The main driver of positive relative performance was sector positioning, notably the underweight allocation to

supranationals, which continued to lag the wider market. Yield curve positioning was also positive, given the strong performance from longer-dated bonds.

Stock selection effects were mixed, with a broadly neutral impact on relative returns overall. Whilst there was positive selection in insurance bonds, notably longer-dated subordinated bonds from Prudential and Legal & General, there were negative selection effects in structured bonds, which generally have a lower sensitivity to wider market moves.

In terms of credit rating bands, the significant underweight allocation to AAA-rated bonds contributed to relative returns; the overweight allocation to BBB-rated bonds was also positive.

The holding in Thames Water was a detractor over the quarter. Whilst structurally junior holding company debt underperformed and was downgraded, the portfolio's larger exposure to the operating company debt was beneficial for performance over the quarter.

In terms of outlook, although the economic data remains mixed, RLAM still believes that higher interest rates will contribute to a slowdown in the UK. This could well impact company earnings and lead to some increase in pressure on credit markets. However, whilst all-in yields are not as attractive as at the start of the fourth quarter, RLAM feels that the excess yield available on investment grade credit overcompensates for the default risk.

Benchmark	6.7	20.3	-	6.0
Excess	-	-	-	-0.1

Source: State Street Global Services  
\*per annum. Net of all fees.

## Performance commentary

The FTSE Developed Paris-aligned index (PAB) returned 6.7% over Q4 2023. The PAB Passive Global Equities product replicated the performance of the benchmark over the period, returning 6.8%.

The PAB's holding in Vestas Wind Systems A/S made a positive contribution to returns of 0.1%. The wind turbine manufacturer reported Q3 profits that were four times greater than analysts' consensus expectations. Vestas is held in the PAB at a larger weight than in the market cap index due to very strong Green Revenue scoring and a positive tilt on TPI Management Quality scoring.

The only Energy sector investments in the PAB are Vestas and First Solar. Not owning companies with exposure to oil

benefitted performance, as oil prices fell significantly over the period.

The PAB's large positions in Microsoft, Amazon and Apple all made significant positive contributions to returns, as Growth stocks benefited from the market factored in a higher probability of interest rate cuts in 2024.

The PAB's holding in Tesla made the largest negative contribution to returns, costing 67 basis points of performance. Tesla is a significant position in the portfolio owing to its strong Green Revenue score and a positive tilt score for Scope 3 Carbon Emissions Intensity. Tesla reported increasing inventories which may put pressure on margins. However, Tesla was not alone in recording weak

performance. The Autos sub-sector underperformed the broader market.

An index rebalancing took place during the quarter. The portfolio decarbonisation trajectory is in line with the requirements of EU regulations for Paris-aligned benchmarks, which utilise EVIC rather than Revenue in its decarbonisation calculations.

## Performance commentary

Passive Developed Equities (GBP Hedged) returned 9.7% in the fourth quarter of 2023 and 23.1% over year. The portfolio replicated the FTSE Developed World (GBP Hedged).

With a large amount of the fund invested in the US, the GBP/USD exchange rate generally has a large bearing on the performance differential between the hedged and unhedged products. The US dollar weakened 4.2% versus sterling following comments from the Federal Reserve that made interest rate cuts seem more likely in 2024. This contributed to the hedged product outperforming the unhedged product.

The main theme of the quarter was that falling interest rate expectations led to longer-duration Growth stocks

outperforming Value stocks. The theme showed through in a number of ways.

In local currency, the US was the strongest-performing of the major developed markets, returning 12.0%. Europe (excluding the UK) returned 7.7%, while Japan and the UK lagged, returning 3.3% and 3.2%, respectively.

The Technology sector continued its strong performance. Within the sector, companies with exposure to chip manufacturing, such as Advanced Micro Devices, Intel and ASML made strong contributions to returns, as better-than-anticipated earnings reports suggested these companies are well-placed to benefit from developments in artificial intelligence technologies. The Industrials sector also performed well.

The Energy sector was the worst-performing, as oil prices fell 21% in US dollar terms. This was caused by a combination of high levels of American supply, and fears that weakening economic activity would foster a drop in demand.

## Performance commentary

Deal activity saw a quarter-on-quarter increase, implying that GPs are beginning to find the comfort required to transact in the current environment. By quarter-end, interest rate rises appeared to be slowing, creating increasing consensus around the future movement of interest rates. Despite a rising number of deals, deal dynamics remained unchanged. GPs continued to fund deals with larger amounts of equity due to maintained higher borrowing costs. Fundraising remained challenging. However, Q3 saw much stronger fundraising than previous quarters, albeit by a smaller cohort of managers. Fundraising uncertainty has inspired a flight to Quality, as a number of top managers raised record funds in what has been a difficult fundraising environment. Exits at the larger end of the market still remain a concern, as IPO markets are still largely shut. Inflationary pressure appears to be easing. However, wage inflation remains sticky in the US and UK, thus creating problems for companies that have a time lag associated with passing costs through to customers.

Portfolio deployment now stands at over ~70% of total commitments. Portfolio performance remains positive, and is slightly down versus the prior quarter. Performance was generally flat across funds in the portfolio.

### Pipeline

The Cycle 1 portfolio is now fully committed, so no new investments are being considered.

## Performance commentary

Deal activity saw a quarter-on-quarter increase, implying that GPs were beginning to find the comfort required to transact in the current environment. By quarter-end, interest rate rises appeared to be slowing, creating increasing consensus around the future movement of interest rates. Despite a rising number of deals, deal dynamics remained unchanged. GPs are continuing to fund deals with larger amounts of equity due to maintained higher borrowing costs. Fundraising remains challenging. However, Q3 saw much stronger fundraising than previous quarters, albeit into a smaller number of managers. Fundraising uncertainty had inspired a flight to quality as a number of top managers raised record funds in what had been a difficult fund-raising environment. Exits at the larger end of the market still remain a concern as IPO markets are still largely shut. Inflationary pressure appears to be easing. However, wage inflation remains sticky in the US and UK, creating problems for companies that have a time lag associated with passing costs through to customers.

The existing Apax fund commitment was transferred into the Neuberger Berman ("NB") Clifton vehicle, out of which all Cycle 3 PE investments are exclusively being made. At quarter-end, commitments had been made to a total of 11 different funds, 8 of which were third-party primary funds in Europe, North America and Asia across predominantly buyout and, to a lesser extent, Growth. Commitments were also made to NB's own secondaries, impact and co-investment funds. Capital calls are being managed via a credit facility set-up by NB on Brunel's behalf. Returns for the portfolio are not yet meaningful given the portfolio is still being committed to manager funds.

## Performance commentary

Deal activity saw a quarter-on-quarter increase, implying that's GPs are beginning to find the comfort required to transact in the current environment. Interest rate rises appear to be slowing, creating greater certainty around their future direction. Despite a rising number of deals, deal dynamics remain unchanged. GPs are continuing to fund deals with larger amounts of equity - an advantage for private debt providers who are underwriting loans into more secure and better-returning capital structures. The current environment remains attractive for debt providers that are issuing new loans. However, incumbent portfolio companies remain under pressure as interest coverage ratios are falling and watchlists are gradually growing in length. Inflationary pressure appears to be easing. However, wage inflation remains sticky in the US and UK, creating problems for companies that have a time lag on passing costs through to customers. These inflationary pressures are creating additional EBITDA margin pressure for companies exposed to wage inflation or staff shortages. Despite this, the Brunel Private Debt portfolio remains well positioned to absorb inflationary pressures due to the portfolio's bias to non-cyclical sectors (such as Technology and Business Services).

The portfolio is ~60% invested. All managers have now called investor capital and some managers are coming towards the end of their investment periods. Portfolio performance was positive across the portfolio and underlying funds over the quarter. The portfolio has one position which underwent restructuring prior to the quarter: a US dental services organization. This business had struggled to recover from some Covid-19 related issues and required additional

## Performance commentary

Deal activity saw a quarter-on-quarter increase, implying that GPs are beginning to find the comfort required to transact in the current environment. Interest rate rises appear to be slowing, creating more confidence about the trajectory. Despite a rising number of deals, deal dynamics remain unchanged. GPs are continuing to fund deals with larger amounts of equity, favouring private debt providers who are underwriting loans into more secure and better-returning capital structures. The current environment remains attractive for debt providers that are issuing new loans. However, incumbent portfolio companies remain under pressure as interest coverage ratios are falling and watchlists are gradually growing in length. Inflationary pressure appears to be easing. However, wage inflation remains sticky in the US and UK, thus creating problems for companies that have a time lag associated with passing costs through to customers. These inflationary pressures are creating additional EBITDA margin pressure for companies exposed to wage inflation or staff shortages. Despite this, the Brunel Private Debt portfolio remains well positioned to absorb inflationary pressures due to its bias to non-cyclical sectors (such as Technology and business services).

The portfolio has now made commitments to four funds, all of which have called capital. Portfolio performance has been marginally negative versus the prior quarter (but remains positive), but given the nascency of investments, such measures are not yet very meaningful. We have good line of sight on finalising the remaining two fund commitments before the end of Q1 2024.

## Portfolio summary

## Performance commentary

Against an unusual and challenging macroeconomic backdrop across 2023, Infrastructure largely proved its resilience to inflationary pressures and higher interest rates. By year-end, many across the US and Europe believed the top of the interest rate cycle had been reached, although inflation was not yet at the level targeted by central banks - and may thus persist for longer than hoped. A scenario of stable - and potentially lowering - interest rates, coupled with higher inflation, is a good outcome for infrastructure assets, since they are correlated with inflation and offer cost pass-through capacity. As reported in prior quarters, Brunel's portfolio is well-positioned, with high quality assets, to remain resilient in this environment.

As a result of Infrastructure's characteristics, many LPs continued to allocate to the asset class, and some were expecting to increase their allocations. According to a Campbell Lutyens' report, which is based on a survey of roughly 130 LPs, 57% said they plan to increase their infrastructure allocation. Following a poor start to 2023, Infrastructure fundraising picked up in H2 2023 and Preqin forecast this trend to continue into 2024, predicting that fundraising will almost double in 2024 to \$84bn.

Deal activity overall in 2023 remained low versus previous years, but this is not siloed to Infrastructure. Dynamics on the sell side have shifted, and there are fewer buyers in the market who can be selective and; many have instead been focused on investing in growing platforms. Debt has indeed increased in cost, but lenders' flight to quality has meant the

## Infrastructure Cycle 1

asset class is relatively well protected and that debt is still available to investors.

Previously, Brunel had reported that a US-specific renewables fund had been experiencing ongoing difficulties, as many underlying renewable challenges still persisted globally. A satisfactory resolution has since been reached which will diminish uncertainty and strengthen the position of the Fund, improving the outlook for LPs.

As at the end of Q4 2023, Cycle 1 Infrastructure was ~97% committed and ~85% invested. Project Anemoi, the final Tactical allocation in Cycle 1, was a co-investment opportunity (alongside Equitix) into an operating offshore wind farm in Scotland; it closed at the start of Q4 2023, thus completing Cycle 1.

Pipeline: Cycle 1 is now fully committed, and so no new investments are being considered.

## Performance commentary

Amid an unusual and challenging macroeconomic backdrop through 2023, Infrastructure generally proved its resilience to inflationary pressures and higher interest rates. Across the US and Europe, by year-end many believed we had reached the top of the interest rate cycle, although inflation is not at the level targeted by central banks and may persist for longer. A scenario of stable, and potentially lowering interest rates, coupled with higher inflation, is a good outcome for infrastructure assets with inflation correlation and capacity for cost pass-through. As reported in prior quarters, Brunel's portfolio is well-positioned with high quality assets to remain resilient in this environment.

During the second half of 2023, Renewable Infrastructure managers continued to focus on addressing the increase in costs realised through their supply chain. As previously reported, capital expenditure in wind assets specifically spiked and made many projects no longer financially viable. Global responses by governments have helped mitigate the impact and the cooling of inflation during H2 2023 implied a more positive outlook for the near term. Global policies and corporate Net Zero commitments continued to provide tailwinds for the industry, while COP 28 stressed the need to triple renewable energy capacity and double efficiency improvements by 2030. Investors will need to be careful and selective to ensure they are investing alongside managers capable of dealing with many of the headwinds that exist.

As at the end of Q4, Cycle 2R was ~87% committed and ~62% invested across 7 primary funds and 10 Tacticals. Only one more Primary fund is required to complete the Cycle 2

## Performance commentary

Against an unusual and challenging macroeconomic backdrop experienced through 2023, Infrastructure largely proved its resilience to inflationary pressures and higher interest rates. Across the US and Europe, by year-end, many believed we had reached the top of the interest rate cycle, although inflation was not yet at the level targeted by central banks - so could yet persist for longer. A scenario of stable, and potentially lowering interest rates, coupled with higher inflation, is a good outcome for infrastructure assets with inflation correlation and capacity for cost pass-through. As reported in prior quarters, Brunel's portfolio is well-positioned, with high quality assets, to remain resilient in this environment.

As a result of Infrastructure's characteristics, many LPs continued to allocate to the asset class, and some were expecting to increase their allocations. According to a Campbell Lutyens' report, which is based on a survey of roughly 130 LPs, 57% said they plan to increase their infrastructure allocation. Following a poor start to 2023, Infrastructure fundraising picked up in H2 2023 and Preqin forecast this trend to continue into 2024, predicting that fundraising would almost double in 2024 to \$84bn.

Deal activity overall in 2023 remained low versus previous years, but this is not siloed to Infrastructure. Dynamics on the sell side have shifted, and there are fewer buyers in the market who can be selective; many have instead been focused on investing in growing platforms. Debt has indeed increased in cost, but lenders' flight to quality has meant the asset class is relatively well-protected and that debt is still available to investors.

## Infrastructure Cycle 3

As at the end of Q4, Cycle 3 is ~45% committed and ~26% invested. Blackstone Energy Transition Partners IV was closed; the global primary fund was focused on primary or secondary beneficiaries of energy transition megatrends. Additional investments include Project Indigo, a European GP-led secondary opportunity with DWS, and Project Mars, a co-investment opportunity alongside Dutch Infrastructure Partners in a telecommunications company focused on enterprise and residential fibre in Midwest US.

Pipeline:

During Q4, two further primary funds were approved by Brunel and are subject to further StepStone due diligence before anticipated closings in Q4 2023 and Q1 2024, respectively: a £29m commitment to a European agriculture-focused primary fund and a £30m commitment to a global diversified primary fund, focusing on renewables, concessions, and utilities. The agriculture fund has already been presented at Client ISG.

£90m remains to be committed to three more funds. A Europe/OECD-focussed energy transition fund has been identified and StepStone continues to progress work on an Infrastructure Secondary fund. This leaves one further general infra fund to be found to complete the fund selection work for Cycle 3.

There are six more tactical investment placeholders in the portfolio construction plan. Opportunities to fill these have yet to be identified.

## Performance commentary

2023 was a less dramatic year for UK commercial property than initially anticipated, with total returns from the industrial sector (+3% since December 2022) partially offsetting the almost-10% decline in the UK Office sector during 2023. Expectations for UK All-Property are muted for 2024, but forecasts of total returns exceeding 7% in 2025 and beyond offer a more positive long-term picture.

Brunel's model portfolio sector weightings reflect the stronger total returns forecast between 2023 and 2027 for the Industrial sector (+c.9% expected) and the lower expectations for the Office sector (+c.4%). Industrial's projected rental growth and a potential supply shortage within prime warehouse space (as speculative development moderates) support

these forecasts. In contrast, an over-supply of secondary office space will continue to push down office sector forecasts. The trend is especially strong where economically obsolete assets, particularly in the regions, may need re-purposing towards leisure or residential uses.

Following a virtual halving of UK property investment volumes in 2023 (compared with 2022), any improvement in financing rates this year will provide greater stability and a stronger framework for increased transactional activity. The key players will be well-financed property and development companies who are strongly aligned with occupier needs. Across the industry, Net Zero Carbon Scope 3 requirements will accelerate engagement and distinguish managers who

have already established Net Zero Carbon pathways from those who are failing to respond to occupier and investor demand. Outside of the Industrial sector, the Brunel model portfolio's >10% exposure to the Residential and the Healthcare sectors should continue to offer rental growth and relatively stable pricing within a tough economic environment.

### Pipeline

There is no fund pipeline, with the portfolio fully committed to model funds.

## Performance commentary

At year-end, cyclical and structural uncertainties still weighed on global real estate markets, though there are hopes that the top of the interest rate cycle has been reached and that inflation rates are falling. The trajectory uncertainty, added to the high cost of debt, was illustrated in the transactional market across all sectors, where year-to-September volumes were \$423bn, reflecting a decrease of 50% and the lowest level of direct investment in over a decade. (Note: the GREFI benchmark is always lagged by c.3 months.) Office pricing and liquidity remained under pressure, and individual assets showed increasing polarisation between highest quality assets and the rest.

Many funds across the globe continued to pay down their redemption queues, particularly in the US. Brunel's model portfolio funds based in the US have redemption queues ranging from 8% to 20% of NAV. While this is a huge magnitude, US redemption mechanisms differ from those in the UK and do not force funds to sell within a set timeframe, with investors often rescinding some of their initial request. This allows managers to fund redemptions using selective, strategy-led sales rather than fire sales, mitigating negative effects for the remaining investors. We are seeing US managers repay the larger queues at a rate of 8-10% of the queue each quarter, if appropriate.

\*\*Performance data shown up to 30 September 2023

The benchmark INREV GREFI index in Q3 fell -1.4%, continuing its negative run. Over the 12-month period, it fell -9.0%. Though all three regions fell, the US was the biggest detractor over Q3 at -2.0%.

Global real estate markets have repriced slower than the UK and do not appear to have revalued sufficiently yet. CBRE are forecasting further declines across non-UK markets throughout 2024, with the logistics and residential sectors expected to stabilise first. The office sector, particularly in the US, is expected to continue its decline for the foreseeable future. "Beds, sheds and alternatives" remain Brunel's preferred sectors.

## Property holdings summary

Holding	Cost (GBP millions)	Market value (GBP millions)	Perf. 3 month**	Perf. FYTD**	Perf. 1 year**	Perf. 3 year**	Perf. 5 year**	Inception Date
Brunel International Property	9.6	63.8	2.1%	-2.5%	-10.9%	4.6%	-	Apr 2020

## International Property

INREV's Consensus Indicator remains subdued in December, with more negative sentiment reflected than in March. Four of the five sub-indicators (including economic, new development, investment liquidity, and financing) fell, indicating weaker sentiment, with only the Leasing & Operations sub-indicator bucking the trend with a positive number. This stems from an improvement in effective rents in participators' portfolios, and a higher net effective rent for new lettings.

### Pipeline

There is one fund in the pipeline: the CBRE Global Alpha Fund is in due diligence for clients with a total commitment below the £50m threshold, or for clients with large legacy holdings..

## Glossary

Term	Comment
<b>absolute risk</b>	Overall assessment of the volatility that an investment will have
<b>ACS</b>	Authorised Contractual Scheme - a collective investment arrangement that holds and manages assets on behalf of a number of investors
<b>active risk/weight</b>	A measure of the percentage of a holding that differs from the benchmark index; can relate to an equity, a sector or a country/region
<b>amount called</b>	In private investments, this reflects the actual investment amount that has been drawn down
<b>amount committed</b>	In private investments, this is the amount that a client has committed to an investment - it will be drawn down (called) during the investment period
<b>annualised return</b>	Returns are quoted on an annualised basis, net of fees
<b>asset allocation</b>	Performance driven by selecting specific country, sector positions or asset classes as applicable
<b>basis points (BP)</b>	A basis point is 0.01% - so 100bps is 1.0%. Often used for fund performance and management fees
<b>CTB</b>	Climate Transition Benchmark - targets 30% lower carbon exposure from 2020 and then a 7% annual reduction
<b>DLUHC</b>	Department for Levelling Up, Housing & Communities; the government body with oversight of pooling
<b>DPI</b>	Distributed to Paid In; ratio of money distributed to Limited Partners by the Fund, relative to contributions. Used for private markets investments
<b>duration</b>	A measure of bond price sensitivity to changes in interest rates. A high duration suggests a bond's price will fall by relatively more if interest rates increase than a bond with a low duration

Term	Comment
<b>EBITDA margin</b>	An EBITDA margin is a profitability ratio that measures how much in Earnings a company is generating Before Interest, Taxes, Depreciation, and Amortization, as a percentage of revenue.
<b>ESG</b>	ESG is an umbrella term to capture the various environmental, social and governance risks investors factor into their assessment of a company's sustainability profile. Brunel views assessing ESG factors as a central part of our fiduciary duty
<b>ESG Score</b>	MSCI (Morgan Stanley Capital International) score based on its assessment of the ESG credentials of an underlying investment. If the portfolio score is below the index, the portfolio is assessed by MSCI to be investing in companies with a better ESG score
<b>extractive exposures VOH</b>	Value of Holdings of invested companies which derive revenues from extractive industries
<b>GP or general partner</b>	In Private Equity, the GP is usually the firm that manages the fund
<b>gross performance</b>	Performance before deduction of fees
<b>Growth</b>	Growth stocks typically exhibit faster long term growth prospects and are often valued at higher price multiples
<b>IRR</b>	Internal Rate of Return - a return that takes account of actual money invested
<b>legacy assets</b>	Client assets not managed via the Brunel Pension Partnership
<b>Low Volatility</b>	Low Volatility is a strategy that attempts to minimise the return volatility.
<b>LP or limited partner</b>	In private equity, an LP is usually a third party investor in the fund
<b>M&amp;A</b>	Mergers and acquisitions

## Glossary

Term	Comment
<b>Momentum</b>	An investment strategy that aims to capitalize on the continuance of existing trends in the market
<b>Money-weighted return</b>	A performance measure that takes into account the timing and size of cash flows, including contributions and withdrawals.
<b>MWR</b>	Money weighted return - similar to an IRR - it reflects the actual investment return taking into account cashflows
<b>NAV</b>	Net asset value
<b>net performance</b>	Performance after deduction of all fees
<b>PAB</b>	Paris-Aligned Benchmark - targets a 50% lower carbon exposure from 2020 and then a 7% annual reduction
<b>Quality</b>	Quality stocks typically have a high Return on Equity, a very consistent profit outcome and exhibit higher and stable margins
<b>relative risk</b>	Relative volatility when compared with a benchmark
<b>sector/stock selection</b>	Performance driven by the selection of individual investments within a country or sector
<b>since inception</b>	Period since the portfolio was formed
<b>since initial investment</b>	Period since the client made its first investment in the fund
<b>SONIA</b>	Sterling Overnight Index Average - Overnight interbank interest rate - replacement for LIBOR
<b>source of performance data</b>	Source of performance data is provided net of fees by State Street Global Services unless otherwise indicated

Term	Comment
<b>standard deviation</b>	Standard deviation is a measure of volatility for an investment using historical data. Volatility is used as a measure of investment risk. A higher number may indicate a more volatile (or riskier) investment but should be taken in context with other measures of risk
<b>time-weighted return</b>	A performance measure that eliminates the impact of cash flows, focussing solely on the investment's rate of return over a specific time period. It does not account for the timing and size of contributions and withdrawals.
<b>total extractive exposure</b>	Revenue derived from extractive operations as a % of total corporate revenue
<b>total return (TR)</b>	Total Return - including price change and accumulated dividends
<b>tracking error</b>	A measure of relative volatility around a benchmark. A fund which differs greatly from the benchmark is likely to have a high tracking error
<b>transitioned assets</b>	Client assets that have been transferred to the Brunel Pension Partnership
<b>TVPI</b>	Total Value to Paid In; ratio of the current value of remaining investments within a fund, plus the total value of all distributions to date, relative to the total amount of capital paid in
<b>Value</b>	Value stocks typically have a low valuation when measured on a Price to Book or Price to earnings ratio
<b>WACI</b>	Weighted Average Carbon Intensity; measures the carbon intensity of businesses rather than total carbon emissions. It is expressed as tonnes of CO2 equivalent per million GBP of investment exposure
<b>yield to worst</b>	Lowest possible yield on a bond portfolio assuming no defaults
